legalEyes

cost effective legaliser for workstations

eyeheight.com

legalEyes primary features

The eyeheight legaliser range is now regarded as an industry standard. With 10 years experience in legalisation this third generation legaliser has been tailored for the small user who requires broadcast quality. Many productions are edited on small online computer systems where the budget is all important. legalEyes is eyeheight's solution to the legalising needs for small users. The heart of the legaliser is the same as higher cost eyeheight units but the operational control and chassis are simplified in a no-nonsense manner. The front panel enables up to 8 pre-defined settings to be recalled making operation very simple.

Provides legalisation of the SDI input signal with full 10 bit processing.

EDH re-insertion.

8 pre-programmed user memories for all commonly used settings.

New EBU R103-2000 setting optimises the gamut to that just allowed by the EBU recommendation.

Optional FP9 front panel can give FULL control of the legaliser.

With FP-9 control the following features will also be available:

Adjustable clipping levels.

Adjustable soft clipping.

Highly effective overshoot and undershoot suppression.

Luma and chroma gain and black level adjustment.
