Real-time Video Processing Board

## Wait No Longer! XPRI™ Redefines Non-linear Editing Again With REAL-TIME HD EFFECTS.

The DMW-RT02 Real-time Video Processing Board improves editing efficiency and speeds up operation of the XPRI system. Packaged into a single compact PCI card, the DMW-RT02 lets you experience real-time effects and high-speed rendering even in High Definition (HD) to make any production job smooth and effective. Specifically, the DMW-RT02 allows you to perform real-time effects on HDCAM™ compressed material and SD material.

# DMW-RT02

## xpri™

### Real-time Capability

The DMW-RT02 is capable of real-time effects on HDCAM compressed material and SD material, uncompressed and compressed. Real-time processing of a number of effect patterns is possible. When using these real-time effects, complex processing such as inserting a 3D transition and a key overlay between two color-corrected channels becomes a reality.

### Accelerated Processing

Although uncompressed HD material is processed using software rendering, tremendous acceleration can be experienced with the DMW-RT02. Also, the DMW-RT02 plays a vital role when editing with more than three layers of HDCAM compressed material and SD material by increasing processing speed.

### Additional Effects

A variety of additional sophisticated effects come standard with the DMW-RT02. In addition, an optional supplementary software package gives the XPRI system capability to apply even more effects. With the DMW-RT02, your system can be upgraded with effects as they become available.
